

IN THE ABSTRACT:

Please substitute the following Abstract for the Abstract starting at page 98, line 3 and ending at line 8.

--An image display apparatus includes a plurality of display devices wired in a matrix through a plurality of scanning signal wirings and a plurality of modulated signal wirings, and a driving circuit for applying a modulated signal having a pulsewidth corresponding to an image signal to each of the plurality of modulated signal wirings. The driving circuit causes the modulated signal to fall in discrete decrements to a non-display state from a display state.--
